

Abstract

The present invention relates to a receiver (100) for a radio broadcast signal, in particular a car radio, as well as a method for receiving a radio broadcast signal. In this connection, a signal decoder (12) is provided, which decodes an audio signal contained in the radio broadcast signal in encoded form, and/or decodes a data signal contained in the radio broadcast signal in encoded form, the signal decoder (12) being designed in such a manner, that the encoded signal is only decoded, when the signal decoder (12) obtains an external authentication signal, which is received via an external transmission path that is different from the transmission path of the radio broadcast signal.
